

STAIN REMOVAL & ODOUR ERADICATION

Unless treated immediately, urine deposits in carpets and fabrics are alkaline in nature. As the urine dries it forms alkaline crystals. These crystals hide bacteria (E-Col i) and contribute toward the evident stain. Removing these urine crystals is essential if the urine treatment is to be effective.

The most effective urine treatments are acidic and neutralize the alkaline crystals allowing them to be removed together with much (or all) of the stain and the odour causing bacteria.

Urine spot treatment can be broken down into two principal divisions, which if understood will make urine spot treatment dramatically more successful.

- 1. Odour Removal** - The mal-odour associated with urine is essentially caused by bacteria. By removing the urine crystals (which harbor bacteria) and destroying the bacteria, the odour source is effectively removed.
- 2. Stain Removal** - The stain caused by urine is often effectively removed by using the correct acid chemistry. However, some stains will only respond to the bleaching action of Hydrogen Peroxide. Furthermore, some urine spills (particularly on wool) will have permanently damaged the carpet fibre and the stain cannot be removed.

To achieve effective urine spot treatment, Actichem have three products available to provide for every situation.

AP491 Pet & Flood

Combination of a carefully selected blend of organic and polymeric acids with antimicrobials and odour neutralizing chemistry. This formula provides for effective neutralization of the urine crystals and stain removal. Pet & Flood also destroys the odour causing germs and provides deodorization. Pet & Flood enjoys a high level of success on the vast majority of urine spots. Certainly the product of choice for all general urine spotting.

AP493 Spotaway U

Spotaway U is a precise concentration of Hydrogen Peroxide for removal of stubborn urine stains

AP434 Biosan

Biosan is a powerful anti-microbial decontaminant with TGA testing approval. Biosan is ideal for treating severe odour sources especially in rug washing applications.

“Pet & Flood will fix that”
