

## Urine Decontamination – some notes

### Pet n Flood

Pet n Flood is used where urine odour is the main cause of complaint.

Pet n Flood contains all the ingredients required to neutralize uric crystals, kill the bacteria and neutralize the mal-odour. It will in many cases also remove or lighten the stain.

Because urine often penetrates far beneath the surface of the carpet, the “wet-out plus water claw” technique with Pet n Flood is often used with great success. One off urine spills or lesser affected areas may be treated with less volume of solution and extracted with a carpet wand.

### Spotaway U

Spotaway U is used where the urine stain is the main cause of complaint.

If urine odour is not detectable or if the Pet n Flood has not removed all the stain, then treatment with Spotaway U is required. Being a hydrogen peroxide based solution it will also treat the uric crystals and bacteria in localized or smaller urine spills. Spotaway U can be left on treated areas without extraction and will continue to work over 2-4 hrs. This is often a great solution where a shadow stain still requires removal.

### Adding Hydrogen Peroxide to Pet n Flood

Pet n Flood is compatible with hydrogen peroxide and the combination of the two solutions provides the best features of both Pet n Flood and Spotaway U in one step.

The addition of hydrogen peroxide (Actichem Perox) will provide the following added benefits;

- Excellent (best possible) stain removal.
- Ultimate antimicrobial capacity which in turn provides extra odour neutralisation.

The following guidelines should prove helpful.

### Wool - Urine Stain removal and decontamination

1Lt ready-to-use solution

- 740ml water
- 200ml Pet n Flood
- 60ml Perox (Hydrogen Peroxide 50%)

The Pet n Flood quantity can be increased if so desired up to 940ml (ie. no water)

### Synthetic - Urine Stain removal and decontamination

1Lt ready-to-use solution

- 700ml water
- 200ml Pet n Flood
- 100ml Perox (Hydrogen Peroxide 50%)

The Pet n Flood quantity can be increased if so desired up to 900ml (ie. no water)

### Hard Surfaces – Urine Stain removal and decontamination

(Wood, concrete, etc)

1Lt ready-to-use solution

- 600 - 700ml water
- 200ml Pet n Flood
- 100 - 200ml Perox (Hydrogen Peroxide 50%)

The Pet n Flood quantity can be increased if so desired up to 800ml (ie. no water)
